Tank Mixing Products

You warrant and undertake to fully observe the rules below at all times when mixing products:

1. Follow all label recommendations for each component product and their water rates in a tank mixture.
2. Each product should be added separately, with the YaraVita™ product first, in the spray tank.
3. Efficient agitation is essential during addition and mixing and must be maintained until application is completed.
4. All mixtures should be used IMMEDIATELY and not left standing in the spray tank for prolonged periods or overnight.
5. The enclosed tank mix information does not cover high spray concentrations as used in aerial applications, L.D.A. or L.V.A.
6. Do not apply any nutrient product alone, or in any tank mix combination, when crops are under environmental and/or agronomic stress such as high temperatures and humidity or dry conditions.
7. Do not tank mix pesticides supplied in soluble sachets with Bortrac 150.
8. Application of any tank-mix combination is entirely at your risk.

KEY TO RESULTS

✓ Products are PHYSICALLY TANK MIXABLE with continuous agitation at the rates tested when added together as follows:

2 way mixes = YaraVita™ product first, multiple mixes - as detailed.

✗ Products are NOT PHYSICALLY TANK MIXABLE.

All tests have been carried out with YaraVita™ products and agrochemicals at the concentrations stated which may not be those recommended by the manufacturer. Yara does not recommend that agrochemicals are used at anything other than the manufacturers recommended rate.

The country of origin of specific agrochemicals is listed after the product or active name. The key to the country codes is as follows:

AL:	Algeria	EI:	Eire	LE:	Lebanon	SE:	Senegal
AR:	Argentina	FI:	Finland	LI:	Libya	SO:	South Africa
AS:	Australia	FR:	France	MO:	Morocco	SP:	Spain

It should be noted that different formulations are often marketed in different countries under the same name. Yara tank mix advice is based on the named agrochemical from the specific country at the date of testing.

Unlisted Combinations

Yara does not recommend the tank mixing of its products with any product or compound not listed. In the event that you require information on a product not listed, please contact us via the Tank Mix Request Form.

Searching by Active Ingredient

The facility to search by active ingredient is provided for convenience and it should be noted that agrochemicals based on the same active ingredient may vary in concentration and formulation. This can affect the tank mixability. Active ingredient alone is no guarantee of the product's tank mix properties and therefore a result for an active ingredient should not be considered as a result for tank mixing other than for the specific product named with the specified country of origin.
